Data Exchange Workflow

Data Exchange Workflow - Illinois DDD

Data Transmission Details

- **Transmission Frequency and Limits**

For optimal system performance, HHAX recommends that visit data is sent in near real time. The expectation is that data is sent by the provider or EVV vendor to HHAX as it is added, changed, and/or deleted in the third party EVV system. Data that is unchanged should not be resent to HHAX. HHAX provides transaction statuses on a separate API call that is initiated by the third party EVV system. HHAX allows maximum five (5) calls per second per consumer.

- **Record Processing Workflow and Endpoints**

There are two types of messages provided to HHAX by the third-party provider or EVV vendor; (1) caregiver demographic data and (2) visit information. Note that caregiver data is to be sent to HHAX first as a record is required to HHAX for visit data to load successfully. The provider and/or EVV vendor provides data to HHAX in JSON format only.

- Caregiver records are required to be sent individually to the API.
- Visit Data can be batched; up to 100 records can be sent per request.
